

Because reusing will always be better than throwing away, Exaion Wipe offers a relevant solution to address your challenges in reducing CO₂ emissions.

DATA SHEET
2023 Q4

Exaion Wipe

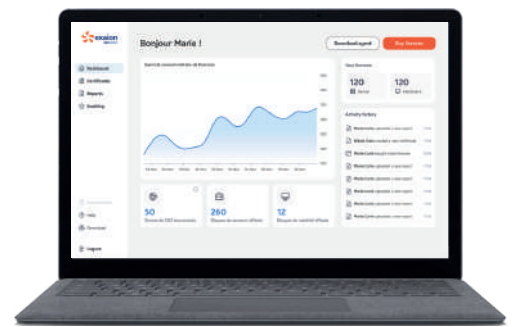

Every year, millions of hard drives are destroyed by companies to protect against data recovery risks.

In the corporate context, the discarding of hard drives is often related to the end of a rental period for equipment, a change in range to improve performance, or simply due to the end of an accounting depreciation.

At the time of their destruction, these hard drives are still in working condition for several more years.

To combat this ecological aberration, Exaion Wipe allows for the reuse of this equipment, thereby reducing waste and conserving the planet's resources.

To date, Exaion Wipe has completed several tens of thousands of erasures.

USE CASES

The solution can be used across all your work environments: desktop computers, laptops, servers, storage bays in data centers, etc.

MODES OF USE

From a USB stick, in erasure units, through an appliance for storage bays and virtual robotics, or via a network server.

CERTIFIED ERASURE

Each erasure is guaranteed by a compliance certificate generated after a rigorous verification of the solution.
